Abstract

A short summary of your approach and expected results.

1. Introduction

This section introduces your problem, motivation, and the overall plan. It should describe your problem precisely specifying the dataset to be used, expected results and evaluation.

2. Related work

A literature survey of past work on this topic. Introduce the baselines you will compare to and the weakness you plan to address.

3. Method

Describe the methods you intend to apply to solve the given problem. If there are existing implementations, will you use them and how? How do you plan to improve or modify such implementations?

4. Results

How will you evaluate your results? Qualitatively, what kind of results do you expect (e.g. plots or figures)? Quantitatively, what kind of analysis will you use to evaluate and/or compare your results (e.g. what performance metrics or statistical tests)? Share any preliminary results if you have them.

5. Conclusion

State your conclusions. This section will be empty for now but your final report should contain the conclusions of your project.
